Steam Leaderboards on veebirakendus, mis kuvab ja järjestab maailma suurima arvutimängupoe, Steami, mängu.

Järjestus on saavutatud kasutades mängijate poolt antud arvustuste positiivsust, hulka ning spetsiaalselt nende mängude järjestamiseks välja mõeldud valemit, mis annab paremaid kohti kõrgelt hinnatud ning populaarsetele mängudele.

Mängude andmeid uuendatakse iga päev automaatselt. Lisaks on võimalik näha mängude kategooriaid, hinda, platvorme ning väljatuleku kuupäevi ning nende järgi mängu filtreerida, et leida endale meeldivaid.

Iga päev tuleb Steami keskmiselt üle kahekümne uue mängu - üle kümne tuhande aastas. Steami enda järjestusalgoritm on kohutav ning sellega on raske leida kõigi mängude hulgast parimaid ja endale meeldivaid, kuid tehtud rakendus üritab seda parandada kasutades paremat järjestamist ning võimalust filtreerida ka kuupäeva järgi, et leida ka uute ja veel mängimata mängude seast parimaid.
